3.1 Introduction

3.2 Related Works

3.3 The Platforms

Meteor.

Raspberry Pi.

3.4 Implementation

Design process.

How the project works.

- Administration scheme: - Services - Data - Knowledge tree - The tree is built in server not in client - External - Map with key-value being the key the name of the external service and the value a function which runs the service

- Searching the tree - scoring the tree with one pass - problem: when we have the query found in the parent and child. Eg: tainara -> tainara@gmail.com

3.5 Results

Failures and successes.

The Ex-Project
